the housing; timer means connected to the signal circuit for setting a normal time interval and activating the signal circuit at the end of the time interval, the timer means including means for automatically initiating additional shorter time intervals at the end of the normal time interval and having programming controls positioned on the housing; an accomplishment switch accessibly positioned on the housing and operable with the timer means to interrupt and reset the timer to the normal time interval when activated; visual means operably connected with the housing to display timer intervals; and a clock operably associated with the timer means to show the time remaining before the next signal activation on the visual means.

12. The device as claimed in claim 11 further comprising: a speaker proximate the housing to produce an audible signal and wherein the produced signal is audible.

13. The device as claimed in claim 12 further comprising: a microphone supported by the housing to receive audible signals and introduce the received signals to the speaker.

15. The device as claimed in claim 14 further comprising: a vibrator carried by the housing operable to receive a produced signal.

16. The device as claimed in claim 1 wherein a number of normal time intervals is set by comparing the first and subsequent manual operations of the accomplishment switch correlated to a 24 hour period and establishing the new normal time intervals ending at the times of peak probability of signal activation.

17. The device claimed in claim 15 wherein a number of normal time intervals is set by comparing the first and subsequent manual operations of the accomplishment switch correlated to a 24 hour period and establishing the new normal time intervals ending at the times of peak probability of signal activation.

19. The device as claimed in claim 2 further comprising: reward means selectively operable by the accomplishment switch to provide physical incentives to the subject upon successful task completion.

21. The device as claimed in claim 18 wherein the rewards means is a selectively openable container holding candy or other treats.
